RTI Community Updates

June 2013

State of the Community

[Lacey Rae Trebaol](#), Engineer + Community Manager

If you've read the [blog entry](#) by CEO Stan Schneider, you already know we have many exciting things happening over on the [RTI Community site](#). I'm really excited about the addition of a [glossary](#) to the [Knowledge Base](#) as well as this new developer-focused newsletter. When I say that the newsletter is going to be developer-focused, I mean it. No gimmicks, only technical content that's relevant to you – the users. Keep on reading and see for yourself.

Forum News

[Gerardo Pardo](#), CTO

The [community forum](#) is a fantastic place to get help from other RTI Connex DDS users, discuss technical approaches to use-cases, and share your knowledge. Your questions and insights can be very valuable to others! Recent threads have gotten into the deep technical details of the DDS API's, such as [this post on the use of the DDS DynamicData API](#). Others had insightful architecture and design discussions, such as [approaches to DDS interface development using XML Application creation](#) and offered great suggestions for product enhancements. Keep them coming!

Best Practices

[Rose Wahlin](#), Principal Software Engineer

We have been busy writing a new set of [best practices](#) for RTI Connex DDS. Take a look to see how to best use Connex DDS for scalability, performance, and maintainability.

New Examples

[Fernando Garcia Aranda](#), Software Engineer

To illustrate some of the many features of RTI Connex DDS we created the [RTI Community Examples Repository](#) in GitHub. You can contribute new examples and enhancements using your GitHub account. Once reviewed, your contributions will be automatically featured in the new [examples section](#), located in the Knowledge Base on the RTI Community Portal.

We're Hiring!

[Jan Van Bruaene](#), VP Engineering

If you fiddle with technology, have a passion for networking and developing software for distributed systems and want to build the underpinnings of the real-time industrial internet, we would love to talk to you. We're looking for talented software engineers in various functions: build and release, devops, core team, tools team and with security background. Check out the [available positions](#) and apply today.

RTI - Your systems. Working as one.
